Changes

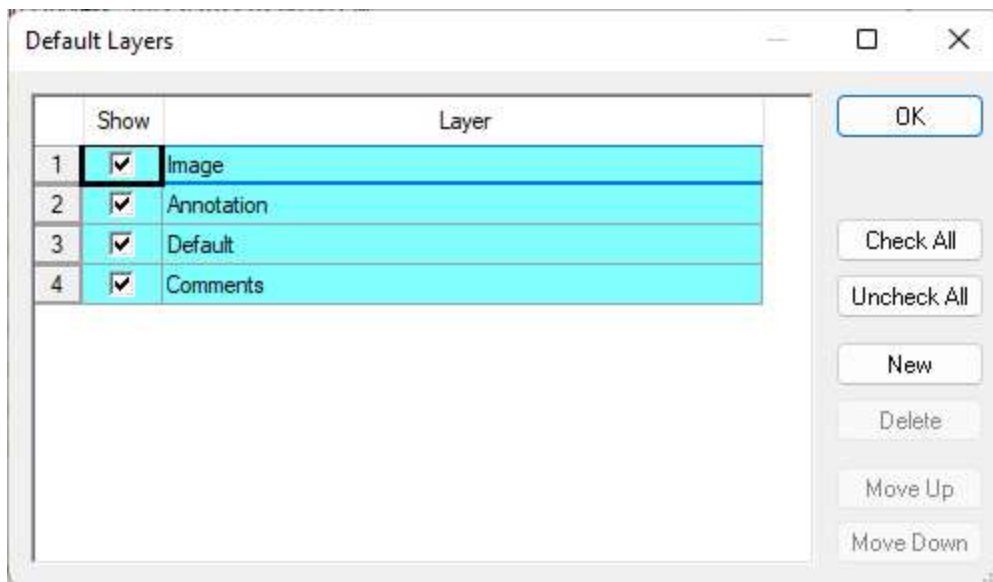

Change to Importing OSP Bid Package Workflow

In previous versions of On-Screen Takeoff, when importing the same OSP Bid Package into the same database, the existing Bid was always overwritten. In 3.98.07, we prompt the user to create a new Bid (so they can see changes/new Comments) or overwrite the existing Bid. The default is “Create New Bid”.

New “Comments” Default Layer

To accommodate the new Project Comments functionality, we added a new Default Layer named “Comments”.

Fixes

- ON-4424 - The preview window is blank when adding an Overlay via the Overlay Wizard.
- ON-4893 - Some users reported that On-Screen Takeoff 3.98.06.19 could not be installed unless the "hidden" Windows Admin account was enabled and used.
- ON-4958 - AutoNaming was not returning results in OST 3.98.06.19.

Known Issues

Please see previous version's release notes.
